## NATURAL RESOURCES

### Wisconsin River Total Maximum Daily Load Plan

#### Motion:

Move to provide \$235,000 GPR on a one-time basis in 2014-15 in an existing DNR appropriation to complete a study of the introduction of nutrients to the Wisconsin River. Modify the current statutory authorization and appropriation to specify that: (a) monitoring is to occur from the headwaters of the Wisconsin River to the dam at the Castle Rock Flowage; and (b) no funds may be encumbered after June 30, 2015.

approp ←

20,370(4)(ac)

#### Note:

2009 Act 28 required DNR to conduct a program to monitor and study the introduction of nutrients, from both point sources and nonpoint sources, to the Wisconsin River from the City of Merrill to the Castle Rock Flowage dam. The act provided \$150,000 GPR annually beginning in 2009-10, and specified that no funds were to be encumbered from the appropriation after June 30, 2014. The bill would provide \$150,000 GPR in 2013-14, but eliminate funding beginning in 2014-15.

The motion would instead provide \$235,000 GPR as one-time funding in 2014-15 for additional development of a total maximum daily load (TMDL) plan, including \$60,000 to contract for pollutant load calculations, \$150,000 to contract for TMDL allowable load allocations, and \$25,000 to contract with UW-Stout for reservoir phosphorus monitoring. A TMDL plan allocates among point sources and nonpoint sources the maximum amounts of pollutants, such as phosphorus, that can be introduced to the water on a daily basis and still allow for the achieving of water quality standards and restoring of functional values previously determined to be impaired. TMDL plans, once developed, are subject to public hearing and approval by the Environmental Protection Agency (EPA).

[Change to Bill: \$235,000 GPR]
